Second Quarter 2004 Discharge Monitoring Report
Waste Discharge Requirements Order Number R4-2002-0030 (Series 007)
Compliance File Number CI-95-036, SLIC 0410
Project Site: Former Boeing C-6 Facility (Building 2 Area), Los Angeles, California

Date:
July 22, 2004

Dear Information Technology Unit:

On behalf of Boeing Realty Corporation (BRC), ARCADIS is submitting this quarterly monitoring report per the Waste Discharge Requirements (WDR) Order Number R4-2002-0030 (Series 007). The purpose of this report and future WDR reports is to provide the Los Angeles Regional Water Quality Control Board (RWQCB) with a summary of amendment and monitoring activities performed at the referenced project site. The site is located at 19503 Normandie Avenue. Figures 1 and 2 illustrate the site location and the site layout, respectively.

Project Number:
CA000594.0003.00005

This monitoring report summarizes groundwater amendment and monitoring activities performed during the second quarter of 2004. Amendment activities performed to test the amendment system are summarized in Section 1.0. Groundwater monitoring activities performed to evaluate the initial distribution of amendment solution are summarized in Section 2.0. A certification statement is provided in Section 3.0.

1.0 Amendment Activities

Amendment solution was not injected at the site during the second quarter. However, a water test was conducted at each amendment point to evaluate the hydraulic performance of the bioremediation system. The water tests were performed according to the *Water Test Plan* (Plan) and the *Water Test Plan Addendum* (Addendum) issued by ARCADIS on May 18 and June 28, 2004, respectively. The Plan and the Addendum were approved by the RWQCB on May 21 and June 29, 2004. RWQCB correspondence regarding approval of the Plan and the Addendum is provided in Appendix A.

July 22, 2004

The water tests were conducted between June 21 and July 12, 2004. As requested by the RWQCB, ARCADIS will submit a report documenting the results of the water tests by December 31, 2004.

2.0 Monitoring Activities

During the second quarter of 2004, groundwater monitoring was conducted according to the *Supplemental Groundwater Monitoring* letter issued by ARCADIS on April 22, 2004. The monitoring was performed to evaluate the initial distribution of amendment solution after the incomplete first injection of carbohydrate solution in February 2004. These monitoring activities are performed in addition to the scheduled monitoring that will be performed after the first amendment event is completed. ARCADIS correspondence concerning the supplemental groundwater monitoring event is provided in Appendix A.

Groundwater monitoring was conducted on May 21, 2004 at monitoring wells IRZBMW001A/B, IRZBMW002A/B, IRZMW005, and CMW026 (Figure 2). The groundwater samples were analyzed for total organic carbon (TOC) using EPA Method 9060 Modified. Field parameters of purged groundwater were also collected (i.e. pH, dissolved oxygen, oxidation-reduction potential, specific conductance, and temperature).

Prior to collecting groundwater samples, depth to groundwater was measured in each monitoring well by using a water level meter accurate to 0.01 feet. Groundwater samples were collected using low flow sampling techniques, so that the purge rate was generally less than 600 milliliters per minute (mL/min) and drawdown while purging was less than 1 foot. Since recharge of monitoring well IRZMW0002A does not support use of low flow sampling techniques, the monitoring well was purged dry prior to sampling.

The sampling methodology also involved use of a flow-through cell that houses field instrumentation used to measure groundwater stabilization parameters (i.e., temperature, pH, specific conductance, oxygen reduction potential, etc.). For each monitoring well, the flow-through cell was connected to a submersible pump with dedicated polyethylene tubing. Once the field parameters stabilized, groundwater samples were collected in laboratory-prepared containers. Field parameters and other relevant sampling data were documented on sample collection logs. The groundwater samples were transported in a chilled ice chest with chain-of-custody documentation and to an analytical laboratory certified by the State of California (Severn Trent Laboratories, Inc.).

Field parameter data and analytical results from the supplemental groundwater sampling event are summarized in Table 1. Laboratory analytical data with associated chain-of-custody documentation are presented in Appendix B. Sample

July 22, 2004

collection logs with field parameter and monitoring well sampling data are maintained in the project files.

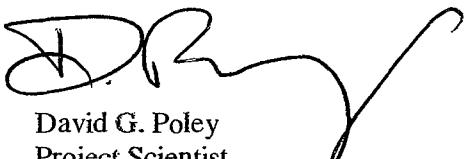

3.0 Certification Statement

I declare under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who managed the system or those directly responsible for gathering the information, the information submitted, is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

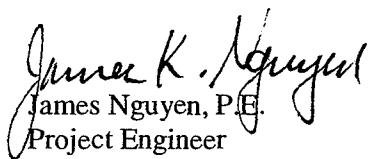

If you have any questions or comments regarding this discharge monitoring report, please contact Alistaire Callender or David Poley at (714) 278-0992.

Sincerely,

ARCADIS G&M, Inc.

WATER TEST PLAN ADDENDUM, GROUNDWATER REMEDIATION, BOEING REALTY CORPORATION, FORMER C-6 FACILITY, 19503 NORMANDIE AVENUE, LOS ANGELES (FILE NO. 95-036)

Dear Mr. Mossman:

We have reviewed the "Water Test Plan (Addendum)" dated June 28, 2004, prepared by Arcadis G&M, Incorporated. Boeing has applied for and received General Waste Discharge Requirements for the injection of a carbohydrate solution into the groundwater beneath the C-6 facility to remediate volatile organic compounds. Boeing constructed a network of injection wells and associated piping beneath the Building 1/36 and Building 2 areas and Boeing injected water to test the hydraulic performance of the Building 2 injection network pursuant to the Water Test Plan dated May 18, 2004, which was approved by the Regional Board on May 21, 2004.

The Water Test Plan (Addendum) Boeing proposes to conduct a subsequent test of the Building 1/36 injection system following the same procedures as previously approved. The existing site-wide groundwater-monitoring program is adequate to monitor groundwater quality and flow conditions across the site and no additional monitoring requirements are necessary for the additional wells to be tested.

We have completed our review of the Water Test Plan (Addendum) and approve its implementation. Please submit report containing the results of the water testing by December 31, 2004. Please call me at (213) 576-6737 if you have any questions.

Sincerely,

John Geroch
Associate Engineering Geologist

Dear Mr. Geroch:

Contact:
James K. Nguyen, P.E.

Phone:
Ext. 3026

Project Number:
CA000594.0003.00005

The purpose of this letter is to propose performing supplemental groundwater monitoring prior to completion of the first amendment addition at the former Boeing C6 Site, Los Angeles, California (Figure 1). An initial schedule was outlined in the above-referenced WDR permit dated February 4, 2003. As outlined in the permit, the baseline sampling event was to be conducted in October 2003. The baseline sampling event was completed in October 2003 as scheduled and reported to the RWQCB in a letter dated November 24, 2003. Subsequent monitoring events hinge on the completion of the first amendment. However, due to delays with building construction activities and the release of carbohydrate solution that occurred on February 23 and 24, 2004 (*Notification of Leakage of Molasses Solution* letter submitted to the RWQCB dated February 27, 2004) during the first amendment addition, we are proposing to perform supplemental monitoring during this interim period to evaluate amendment distribution prior to completion of the first amendment.

Due to the release of the carbohydrate solution, amendment activities were immediately terminated and the RWQCB notified. The condition of the amendment points and lateral lines is being evaluated using potable water for testing. Amendment activities are currently suspended and will resume after the water test is completed, the potential causes of the release are assessed, and the delivery method is modified to prevent future release. Currently, the water test is scheduled for either April or May 2004.

Per the WDR permit, the first monitoring event will be conducted 2 weeks after completing the first amendment event. The monitoring frequency as set forth in the permit is to conduct monitoring after 2, 6, 12, 16, 21, and 36 weeks after the first

Part of a bigger picture

ARCADIS

Mr. John Geroch
April 22, 2004

amendment event and quarterly thereafter. As outlined in the permit, monitoring events were scheduled for November and December 2003, January, February, March, and July 2004. However, due to the delays mentioned above, we propose to perform supplemental monitoring to monitor the distribution of placed amendment during this interim period. Monitoring will still be conducted 2, 6, 12, 16, 21, and 36 weeks after the completion of the first injection event, and quarterly thereafter in accordance with the permit. Since the first amendment event was postponed until June 2004, the first monitoring event will likely be conducted in late June or early July 2004.

During the interim period while the injection system is being evaluated, the supplemental groundwater monitoring program will consist of collecting additional groundwater samples to evaluate the amendment distribution. It is proposed that monitoring be conducted in May 2004 from the following monitoring wells: IRZBMW001A/B, IRZBMW002A/B, IRZMW005, and CMW026 (Figure 2). Samples will be collected and analyzed for total organic carbon using EPA Method 9060 Modified. In addition, field parameters will also be collected (i.e. pH, dissolved oxygen, oxidation-reduction potential, specific conductance, and temperature). Sampling protocol will be conducted as described in the IRZ pilot test workplan. Samples will be collected from these during the week of May 17th.

If you have any questions or comments regarding this letter, please contact Jim Nguyen at (714) 278-0992.

Sincerely,

ARCADIS G&M, Inc.

Dear Mr. Nguyen,

This report contains the analytical results for the eight samples received under chain of custody by STL Los Angeles on May 21, 2004. These samples are associated with your Boeing former C6 Torrance, California project.

All applicable quality control procedures met method-specified acceptance criteria except as noted on the following page. Historical control limits for the LCS are used to define the estimate of uncertainty for a method. See Project Receipt Checklist for container temperature and conditions. Temperature reading between 2 to 6 degrees Celsius is considered within acceptable criteria. Any matrix related anomaly is footnoted within the report.

STL Los Angeles certifies that the tests performed at our facility meet all NELAP requirements for parameters for which accreditation is required or available. The case narrative is an integral part of the report. This report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions, please feel free to call me at (714) 258-8610 extension 313.

Sincerely,

Diane Suzuki

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory..
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.
